

GANGNAM GENTLE
DENTAL CLINIC

Precautions

After Conscious Sedation

Please remove the band applied after treatment **in the evening**. Do not rub the area, as this may cause bruising.

You may drink water and eat **after 2 hours**.

Mild fever, nausea, or dizziness may occur. These are **normal reactions**.

Because of these symptoms, there is a risk of accidents on the same day—please use **public transportation** instead of driving.

Smoking and alcohol are strictly prohibited on the day of sedation.

Allow your body time to recover from the anesthesia. Rest and sleep as needed, and **avoid going out or strenuous activity**.
